

1

Seven personas enter the product with distinct primary needs and key decisions to make

2

The Core User Journey spine: Upload Script through Executive Report, 10 stages end to end

3

Script Ingestion & Project Setup: upload, parse, extract, and version the screenplay

4

Story Intelligence: AI reads structure, character, pacing, theme, and flags evidence per page

5

Professional Coverage Workspace: human reader accepts, edits, rejects, or rewrites every AI finding

6

Audience & Market Intelligence: audience hypotheses and positioning, challengeable by humans

7

Comparable Intelligence: evidence-based comps a human can add to or remove from

8

Production Complexity Intelligence: shooting days, locations, and build/VFX/stunt drivers

9

Budget & Financial Intelligence: indicative budget range with sensitivity and confidence, not false precision

10

Explainable Verdict: GREENLIGHT / DEVELOP / REPOSITION / PACKAGE / PASS with drivers, risks, and confidence

11

Scenario Simulator: adjust budget, talent, distribution, VFX to see risk-adjusted outcomes recalculate live

12

Human-in-the-Loop Decision Workspace: review, challenge, override, and attribute every decision

13

Decision Record & Executive Report: final rationale captured and exported for the boardroom

User Experience Map - The Verdict AI - v1

Who Uses The Verdict — Target Personas

Development Executive

Evaluate creative & commercial viability

Producer

Understand feasibility & financing implications

Studio / Content Executive

Compare projects consistently

Independent Producer

Build a credible project case

Production / Ops Leader

Identify physical production complexity

Finance / Strategy Executive

Understand downside & sensitivity

Human Script Reader / Analyst

Accelerate analysis without losing professional judgment

Human Decision

Decision Record

Executive Report

1

Script Ingestion & Project Setup

- Upload screenplay / script PDF or structured format
- Auto-extract scenes, pages, characters, locations, INT/EXT, day/night
- Persistent Project ID + versioned source document
- Parsing uncertainty flagged for human review
- Every finding traceable back to page / scene

2

Story Intelligence

- Premise, logline, structure & pacing analysis
- Character arc & relationship analysis
- Conflict, stakes, themes, tone, genre
- Strengths / weaknesses with page-level evidence
- Revision opportunities ranked by impact
- Clear split: observed evidence vs. AI interpretation

3

Professional Coverage Workspace

- Editable: logline, synopsis, strengths, weaknesses, marketability, production notes, recommendation
- Accept / Edit / Reject / Rewrite any AI finding
- Add human comments AI didn't detect
- Mark AI findings inaccurate or unsupported
- AI explains evidence behind each finding
- Final coverage clearly labeled "human-reviewed"

4

Audience & Market Intelligence

- Primary / secondary audience hypotheses
- Audience breadth vs. niche appeal
- Genre & format demand signals; competitive saturation
- Theatrical / streaming / premium cable positioning
- Audience risks & unmet opportunities surfaced
- Human can challenge or replace AI assumptions

5

Comparable Intelligence

- Relevant comparable titles identified
- Similarity scores—narrative, audience, genre, budget, production model, distribution
- Creative comps separated from commercial comps
- Data freshness & source confidence shown
- Human can add or remove comparables

6

Production Complexity Intelligence

- Shooting days estimated from script complexity
- Location count & recurring locations identified
- Heavy builds / construction requirements flagged
- Stunts, VFX, SFX, crowd, water, vehicle drivers
- Virtual production candidates & stage footprint
- Assumptions shown — never a final budget

7

Budget & Financial Intelligence

- Indicative budget range, not false precision
- Major cost drivers identified
- Budget sensitivity modeled
- User enters known talent / location / incentive data
- Confidence intervals & uncertainty shown
- Modeled assumptions kept separate from verified data

8

Explainable Verdict

- Decision path, never a single black-box score
- Displays: positive-drivers, risk drivers, assumptions, confidence level, data limitations, what would change it

GREENLIGHT

DEVELOP

REPOSITION

PACKAGE

PASS

9

Scenario Simulator

- IN: budget, marketing spend, talent strength, location, distribution, release scale, VFX strategy, audience fit
- OUT: risk-adjusted opportunity, commercial range, sensitivity, complexity, reach, confidence, top factors
- Compare Scenario A / B / C side by side
- "What would change the Verdict?" recommendation

10

Human-in-the-Loop Decision Workspace

- Review Queue → Evidence View → Challenge Finding
- Override → Confidence Adjustment → Decision Notes
- Attribution → Versioning
- AI baseline vs. human revisions always kept distinct
- Team collaboration: comments, assignments, status

11

Decision Record & Executive Report

- Captures final decision, rationale, assumptions, contributors
- Boardroom-ready Executive Report export
- Sections: Overview, Coverage, Story, Audience/Market, Comparables, Production, Financials, Verdict, Drivers, Confidence, Scenario Compare, Reviewer Notes, Decision
- Stored for future Decision Replay learning
